## Abstracts

The global Glass Double Edger Production Line market size is expected to reach \$ 456 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

In 2024, global Glass Double Edger Production Line reached approximately 1,564 units, with an average global market price of around 182.6 K USD/unit.

A Glass Double Edger Production Line is an integrated set of specialized manufacturing equipment designed for precision edge processing of flat glass, primarily used to grind, polish, and chamfer both sides of glass sheets simultaneously. Composed of feeding units, edge grinding modules, polishing components, conveying systems, and control panels, it operates through automated or semi-automated processes to ensure uniform edge quality, dimensional accuracy, and smooth surface finish, catering to the edge refinement requirements of various glass products before they enter subsequent processing or application stages.

Demand for Glass Double Edger Production Lines is driven by the expanding development of end-use industries such as construction, automotive, electronics, and furniture, which require high-quality edge-finished glass, as well as the growing emphasis on production efficiency and product consistency in glass manufacturing. Business opportunities lie in developing high-precision and fully automated production lines to meet the stringent requirements of electronic and automotive glass; integrating intelligent technologies for real-time process monitoring and fault diagnosis to enhance operational efficiency; optimizing equipment design for processing special glass types (e.g., ultra-thin, ultra-thick, or tempered glass); and exploring emerging markets by offering customized solutions and after-sales technical support tailored to regional industry needs.
