The glass surface can be coated with ink, paint, varnish, epoxy resin, enamel and ceramic ink according to different purposes. They are usually diluted with diluent, solvent or water. They are usually coated on the glass surface by various machines such as screen printing machine, roller coating machine, curtain coating machine and spraying machine or simply manually. After that, the diluent, solvent or water is no longer used and needs to be removed. The ink is heated and dried in an oven at a certain temperature. During the drying process, diluent, solvent or water will evaporate and these vapors will be removed by discharging from the drying furnace.
