Glass etching involves altering the surface of glass through techniques like sandblasting and fluorination. Historically, this effect was achieved by chemically corroding the glass surface, but advancements in sandblasting technology have revolutionized the process. Glass etching is used to create designs, letters, patterns, and marks with various techniques such as frosting, blurring, and step etching, enabling the creation of glass with artistic qualities and versatility for interior decoration.

Glass etching is commonly used as a decorative element in interior doors, doorways, mirrors, and windows. It is popular in brand stores, boutiques, beauty salons, clubs, bars, cafes, and restaurants for creating a sophisticated image. In hotels and wedding halls, it adds elegance and luxury to entrances and lobbies. Additionally, glass etching is employed in smaller objects like wine glasses and cell phone straps, showcasing its versatility beyond architectural applications.
