Glass mat thermoplastics are semi-finished products in the form of panels. Compared with glass fiber reinforced thermoplastics, glass fiber mat thermoplastics have better mechanical properties due to their higher glass filament residual length. Fiberglass felt thermoplastics are often used in place of metals such as steel and aluminum. Glass fiber felt thermoplastic is a lightweight material with excellent impact resistance. It has a low relative density, excellent hardness and stiffness at low temperatures, and durability, easy recycling, chemical resistance and moisture resistance. Automotive and inflation industry demand for glass mat thermoplastics has led to the growth of the global glass mat thermoplastic market.
