Abstracts

The global Glass Fiber for Construction market size is expected to reach \$ 230 million by 2032, rising at a market growth of 3.1% CAGR during the forecast period (2026-2032).

In 2025, global sales volume for glass fiber for construction is projected to reach 420,000 tons, with an average selling price of approximately \$410 per ton.

Glass fiber for construction is an inorganic, non-metallic material produced using glass beads or recycled glass as raw materials, processed through high-temperature melting, drawing, and winding techniques. Possessing exceptional characteristics?including light weight, high strength, corrosion resistance, fire and flame retardancy, and electrical insulation?it serves as an indispensable, high-performance reinforcing agent and composite material in modern construction.

The upstream sector primarily involves mineral raw materials such as pyrophyllite, kaolin, and limestone. These materials undergo manufacturing processes?including high-temperature melting, drawing, winding, and weaving?to produce glass fiber products and composites, which are subsequently utilized in downstream industries. Typically processed into mesh fabrics, substrates for waterproofing membranes, or thermal insulation wool, these materials are widely applied in structural reinforcement, exterior wall insulation, and waterproofing and moisture-proofing projects.

Key market drivers include the following factors:

Energy Efficiency in Buildings and Upgrades to Building Envelopes Drive Demand

Market growth for construction-grade glass fiber is primarily driven by the demand for building energy conservation, thermal insulation, and upgrades to building envelope systems. Glass fiber is characterized by its light weight, high strength, corrosion resistance, excellent weatherability, superior thermal insulation properties, and strong dimensional stability. Consequently, it is utilized in a wide range of products, including glass fiber mesh fabrics, glass wool, glass fiber mats, reinforced mortars, exterior wall insulation systems, waterproofing membrane substrates, gypsum board reinforcement, and composite building materials. As the construction industry imposes increasingly stringent requirements regarding exterior wall insulation, crack resistance and tensile strength, roof waterproofing, noise reduction, and indoor comfort, the application of glass fiber in both new construction projects and the renovation of existing buildings continues to expand, gradually establishing itself as a fundamental material for enhancing the performance of building materials.

Urban Renewal and Infrastructure Maintenance Generate Sustained Demand

The maintenance of existing building stock, the renovation of aging residential communities, the refurbishment of public buildings, waterproofing for underground spaces, the reinforcement of bridges and tunnels, and municipal engineering projects collectively provide a stable scope of application for construction-grade glass fiber. Traditional building materials often suffer from cracking, leakage, aging, and localized structural damage during their long-term service life; in contrast, glass fiber-reinforced materials can enhance crack resistance, tensile strength, corrosion resistance, and overall durability without significantly increasing structural weight. This makes them ideally suited for applications such as wall reinforcement, waterproofing enhancement, the strengthening of insulation systems, and the fabrication of composite structural components. As regulatory oversight of construction quality becomes stricter and building maintenance cycles shorten, construction enterprises are placing greater emphasis on material reliability, ease of installation, and total lifecycle costs?factors that are driving increased demand for glass fiber materials.

The Advancement of Green Building Materials and Composites Enhances Product Value

The construction industry's shift toward low-carbon practices, the rise of prefabricated construction, and the promotion of green building materials are driving the evolution of glass fiber for construction use?transforming it from a standard reinforcing agent into a high-performance, functional composite material. Compared to certain traditional metal-based reinforcing materials, glass fiber offers distinct advantages such as lightweight

properties, corrosion resistance, immunity to rust, and processing flexibility; these attributes help extend the service life of structural components while reducing long-term maintenance costs. Concurrently, product categories including glass fiber mesh, glass wool insulation, glass fiber-reinforced plastics, composite rebar, and fire-retardant thermal insulation materials are becoming increasingly specialized to suit a diverse range of architectural settings and construction methodologies. Future market competition will center on key performance metrics such as fiber tensile strength, alkali resistance, thermal insulation efficiency, fire rating, environmental sustainability, and comprehensive system integration capabilities.

This report studies the global Glass Fiber for Construction production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Glass Fiber for Construction and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Glass Fiber for Construction that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Glass Fiber for Construction total production and demand, 2021-2032, (Tons)

Global Glass Fiber for Construction total production value, 2021-2032, (USD Million)

Global Glass Fiber for Construction production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Tons), (based on production site)

Global Glass Fiber for Construction consumption by region & country, CAGR, 2021-2032 & (Tons)

U.S. VS China: Glass Fiber for Construction domestic production, consumption, key domestic manufacturers and share

Global Glass Fiber for Construction production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Tons)

Global Glass Fiber for Construction production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Tons)

Global Glass Fiber for Construction production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Tons)

This report profiles key players in the global Glass Fiber for Construction market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies

covered as a part of this study include Taishan Fiberglass (Sinoma) (CN), Taiwan Glass Group (TW), Nittobo (JP), Chongqing Polycomp International Corp. (CPIC) (CN), Linzhou Guangyuan New Materials Technology Co., Ltd. (CN), Grace Fabric Technology Co., Ltd (CN), Saint-Gobain Vetrotex (FR), AGY Holding Corp (US), Polotsk (BY), BGF Industries (US), etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Glass Fiber for Construction market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), volume (production, consumption) & (Tons) and average price (US\$/Ton) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

Key Questions Answered:

1. How big is the global Glass Fiber for Construction market?
2. What is the demand of the global Glass Fiber for Construction market?
3. What is the year over year growth of the global Glass Fiber for Construction market?
4. What is the production and production value of the global Glass Fiber for Construction market?
5. Who are the key producers in the global Glass Fiber for Construction market?
6. What are the growth factors driving the market demand?
