Abstracts

The global Glass Fiber Chopper market size is expected to reach \$ 34.12 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

Glass Fiber Chopper is a special equipment that cuts continuous glass fiber strands, rovings or fiber bundles into chopped fibers according to a set length, belonging to post-processing equipment for glass fiber forming and preparation equipment for composite raw materials. It usually consists of a yarn guiding mechanism, traction pressure rollers, a cutter roller, a driving system, a length adjusting mechanism, a collecting device, a dust removal and protection device, and an electric control system. According to the process position, it can be divided into on-line choppers and off-line choppers. Its core functions are to achieve stable traction, fixed-length cutting and continuous discharging, so as to obtain chopped glass fibers with uniform length and good dispersibility, meeting the application requirements of thermoplastic/thermoset composites, BMC/SMC, reinforcing fillers and other fields. In 2025, the global sales volume of Glass Fiber Chopper is approximately 4,744 units, with an average price of about \$4,890 per unit, and the average industry gross profit margin is around 25%.
