Abstracts

According to our (Global Info Research) latest study, the global Glass Fiber Reinforced Epoxy Core Rod for Composite Insulators market size was valued at US\$ 180 million in 2025 and is forecast to a readjusted size of US\$ 285 million by 2032 with a CAGR of 6.7% during review period.

Glass Fiber Reinforced Epoxy Core Rod for Composite Insulators is a high-strength insulating and load-bearing component manufactured from continuous glass fibers as the reinforcement and epoxy resin as the matrix through impregnation, pultrusion, and continuous curing. It is one of the key structural components of composite insulators. The product typically uses E-glass or corrosion-resistant ECR glass fibers and is required to provide high tensile strength, good flexural performance, excellent electrical insulation, acid and corrosion resistance, low moisture absorption, and long-term resistance to aging and brittle fracture. The core rod is generally covered with a silicone rubber housing and sheds and connected to metal end fittings. It is widely used in suspension, tension, line post, station post, railway, and other high-voltage and extra-high-voltage composite insulators. The price of Glass Fiber Reinforced Epoxy Core Rods for Composite Insulators is mainly influenced by rod diameter, E-glass or ECR-glass reinforcement, epoxy resin system, acid and brittle-fracture resistance, mechanical strength, and procurement volume. In 2025–2026, standard products are generally priced at around US\$1.4–2.5/kg. Conventional E-glass epoxy core rods are typically about US\$1.4–1.8/kg, while corrosion-resistant ECR-glass epoxy rods are generally around US\$1.8–2.5/kg. High-strength, high-temperature-resistant, acid-resistant, and ultra-high-voltage grades may reach US\$2.5–4.0/kg or higher.

The upstream value chain mainly includes E-glass/ECR-glass rovings, epoxy resins,

curing agents, accelerators, and silane coupling agents. Midstream manufacturers produce FRP core rods through fiber impregnation, continuous pultrusion, and thermal curing. Downstream customers are mainly composite insulator manufacturers, with the rods used in suspension, tension, line post, station post, and railway composite insulators. They may also be used in surge arresters, fuse cutouts, and other electrical insulation products, ultimately serving power transmission and distribution, grid construction, and railway electrification markets.
