Glass fiber reinforced plastic (GFRP) composites refer to composite materials made of resin reinforced with glass fiber. GFRP composites is used for its high mechanical strength, light weight, corrosion and temperature resistant properties, thermal insulation, smooth internal surface, easy to form complex shapes, ease of repair and its cost effectiveness.

Glass fiber reinforced plastic (GFRP) composites refer to composite materials made of resin reinforced with glass fiber. GFRP composites is used for its high mechanical strength, light weight, corrosion and temperature resistant properties, thermal insulation, smooth internal surface, easy to form complex shapes.

GFRP composites have a higher strength-to-weight ratio, which is an important factor in automobile manufacturing. Vehicles with low-weight materials and high strength have better mileage and reduce the fuel cost. The typical applications of GFRP composites in the transportation industry include doors, roof panels, windows, headrest back panels, seats, luggage bins, and cooling ventilators. These factors are fueling the growth of the GFRP composites market in the transportation industry and encouraging the invention of new GFRP composites applications. Especially under the increasingly strict global emission regulations.
