## Abstracts

According to our (Global Info Research) latest study, the global Glass Fiber Reinforced Polyamide market size was valued at USD 1099.9 million in 2023 and is forecast to a readjusted size of USD 1832 million by 2030 with a CAGR of 7.6% during review period.

The main characteristics of glass fiber reinforced polyamide include extremely high rigidity, high mechanical strength, high hardness and toughness, and high creep strength. In addition, they have excellent dimensional stability, good fatigue strength and high mechanical damping properties. All these properties make the material suitable for working conditions that withstand high static loads for a long time under high temperature conditions. Because glass fibers are very susceptible to abrasion on the surface of mating parts in some cases, these glass fiber reinforced polyamides are not suitable for sliding applications.

Composites include fiber-reinforced materials and organic matrices, with the most commonly used materials being Glass Fiber Reinforced Polymer (GFRP) and Carbon Fiber Reinforced Polymer (CFRP) composites, followed by composites reinforced with aramid or natural fibers. After a decline in production in 2020, the global composites industry is gradually returning to pre-pandemic growth rates, with the energy, electronics/electrical, construction, marine and consumer goods markets showing rapid recovery. New growth opportunities are also emerging in emerging sectors such as electric and hydrogen-fueled vehicles, marine, sports and recreation, medical, electrical and electronics, oil and gas, furniture and design, defense and security, and renewable energy. Between now and the future, composites will provide higher performance, lighter, more energy efficient as well as more durable products in a wider range of applications and markets.
