Abstracts

The global Glass Fiber Reinforced Polyester Filament Base Fabric market size is expected to reach \$ 227 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

Glass fiber reinforced polyester filament base fabric is a high-performance base material for waterproof membranes. It is based on traditional polyester filament base fabric (made from polyester chips melted and spun into filaments and then needle-punched), with glass fiber filaments added longitudinally, giving it both the toughness of polyester and the high strength and dimensional stability of glass fiber.

The upstream supply chain consists of basic raw materials, mainly including polyester chips (PET) for producing polyester filaments, and glass fiber filaments as reinforcing materials.

Global sales are projected to be approximately 41,000 tons in 2025, with an average market price of approximately US\$3341 per ton. The industry's gross profit margin is approximately 15-30%.

This report studies the global Glass Fiber Reinforced Polyester Filament Base Fabric production, demand, key manufacturers, and key regions.
