Abstracts

According to our (Global Info Research) latest study, the global Glass Fiber Reinforced PPS market size was valued at US\$ 1235 million in 2025 and is forecast to a readjusted size of US\$ 1783 million by 2032 with a CAGR of 5.5% during review period.

Glass fiber reinforced PPS is an engineering plastic composite made by combining polyphenylene sulfide (PPS) resin with glass fiber. Its main characteristic is a comprehensive improvement in performance, particularly in rigidity, strength, and heat resistance. The upstream industry mainly includes the production of PPS resin and glass fiber, which are the core raw materials for manufacturing glass fiber reinforced PPS composites. Downstream applications are key to driving the development of the entire industry chain, mainly concentrated in the automotive, electronics, aerospace, and home appliance sectors. Global sales are projected to reach approximately 160,000 tons in 2025, with an average global price of around US\$7,500 per ton. The gross profit margin for major producers in the industry is estimated at 25%-38%.

Glass fiber reinforced PPS is a high-performance material. Reinforced with glass fiber, it possesses strength, heat resistance, and dimensional stability. Its price is also more advantageous than many metals and specialty engineering plastics, making it popular in multiple fields. The main driving factors are the upgrading of high-temperature and high-pressure components due to automotive lightweighting and electrification, as well as the demand for high-heat-resistant, flame-retardant, and dimensionally stable shell materials from industries such as 5G, photovoltaics, and energy storage. At the same time, increasingly stringent environmental regulations are also prompting the

replacement of traditional metal parts and thermosetting materials with recyclable, high-performance thermoplastic materials.
