According to our (Global Info Research) latest study, the global Glass Laser Punching Machine market size was valued at US\$ 153 million in 2024 and is forecast to a readjusted size of USD 222 million by 2031 with a CAGR of 5.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Glass laser punching machine is a device that uses a high-precision laser beam to process micro holes on glass materials. It focuses high-intensity laser energy to instantly melt or evaporate glass, achieving precise and efficient drilling operations without the need for physical contact. It is widely used in electronics, optics, automobiles, and medical industries. It is particularly suitable for processing brittle and hard glass materials, and can ensure high-quality hole edges and minimized heat-affected zones.

The development trend of glass laser drilling machines is moving towards higher precision, higher speed and greater flexibility. With the continuous advancement of laser technology, such as the application of femtosecond laser technology, cold processing has become possible, which can achieve higher quality micro-hole processing without damaging the material. At the same time, the increase in equipment power has also accelerated the processing speed and adapted to the processing needs of thicker glass. In addition, the accuracy of the visual positioning system continues to improve, ensuring the accuracy of the processing position. In the future, glass laser drilling machines will be more integrated, combined with intelligent control systems, support automated

production and remote monitoring to meet the requirements of Industry 4.0 and promote the optimization and efficiency improvement of the entire manufacturing process.
