Abstracts

The eye is one of the most sophisticated organs in the human body. The retina, the light-sensitive tissue inside the eye, converts light into electrical impulses, which are sent to the brain. A refractive error occurs when the light entering the eye is not focused properly on the retina, distorting the signal sent to the brain. The most common eye conditions are myopia (nearsightedness) and hyperopia (farsightedness). People with myopia cannot clearly see objects in the distance and require a concave glass lens to correct their vision. As of 2015, more than one-quarter of the world population was diagnosed with myopia, and by 2020, 49% of The global population will have myopia. Hyperopia is an eye condition in which a person cannot clearly see nearby objects. Prescription lenses can be used to correct vision related issues.

Scope of the Report:

This report focuses on the Glass Lens in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. North America dominated the glass lens market in 2015, by contributing approximately 54% of the overall market share. Much of this region's growth could be attributed to the increasing prevalence of vision loss among the aging population. Factors such as the growing incidences of eye disorders such as cataracts, diabetic retinopathy, glaucoma, and age-related macular degeneration will increase the use of eyeglasses in the region. The rising elderly population will be one of the key factors fueling the market's growth during the next few years. Improved medicines and the increasing shift from acute to chronic diseases has eventually increased the life expectancy of the elderly population in the recent years. According to World Bank, population aged 65 and above

represented over 8% The global population as of 2016. However, vision loss is one of the key issues faced by elderly people. As a result, with the increasing geriatric population in countries including Japan, higher number of people will be at the risk of visual impairment owing to aging processes and chronic eye diseases such as cataract, dry eye, glaucoma and others. This, in turn, is expected to drive the glass lens market positively during the next few years.

The worldwide market for Glass Lens is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
