The global Glass NTC Thermistor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Glass NTC Thermistor is a heat-sensitive semiconductor resistor, which is composed of polycrystalline ceramics of mixed oxides. Its resistance value decreases with the increase of temperature, and the temperature coefficient of resistance is $-2\%/k \sim -6\%/k$. In the range, roughly 10 times the temperature coefficient of metal resistance. The change of the resistance value of the NTC thermistor can be caused by the change of the external environment temperature, or it can be caused by the current flowing and self-heating. Its various uses are based on this characteristic.
