Abstracts

Glass is one of the most preferred materials for packaging of food, beverages, pharmaceuticals, personal care products and others. Properties like chemical inertness, sterility and reusability make it an efficient packaging material. The other major advantages of glass packaging are that it can be molded into various shape and sizes, facilitating its use across different industry verticals. Even though glass remains the preferred packaging material for a variety of products, the growing usage of plastics as a replacement for glass will hamper its market growth. Advancements in the field of plastics for safe usage in different applications will restrict the glass usage.
