Abstracts

The global Glass Reinforced Epoxy Pipes market size is expected to reach \$ 2671.1 million by 2029, rising at a market growth of 5.1% CAGR during the forecast period (2023-2029).

Global key players of glass reinforced epoxy pipes include Future Pipe Industries(FPI), National Oilwell Varco(NOV), Amiantit, Shandong Ocean Pipe, Advanced Piping Solutions, etc. The top five players hold a share about 40%. Asia-Pacific is the largest market, has a share about 30%. In terms of product type, High Pressure GRE Pipe is the largest segment, occupied for a share of 50%, and in terms of application, Oil & Gas has a share about 38 percent.

Glass Reinforced Epoxy or GRE pipes are a valid alternative to carbon steel pipes especially for corrosive, aggressive and normal environments.

GRE pipe technology is based on the Discontinuous Filament Winding process using high strength fiberglass (E-glass) and amine cured epoxy resin as basic material. Numerically controlled machines manufacture the product on a mandrel according to the cross section filament winding process. The continuous glass fibers are helically wound at predetermined angles and bonded with the epoxy resin.

Lightweight and easy to handle and install GRE pipes have a smooth internal surface that reduces friction and enables a high pipe flow capacity. Low thermal conductivity of GRE pipes in comparison to steel (only 1% of steel values), minimizes the cost of insulation and the heat loss. Another major benefit of GRE pipes is that once installed they are virtually maintenance-free.

This report studies the global Glass Reinforced Epoxy Pipes production, demand, key manufacturers, and key regions.
