According to our (Global Info Research) latest study, the global Glass Reinforced Plastic market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Numerous fine glass filaments collectively form glass fiber. There are two essential types of it composite and insulated. It is mostly made of silica which with other materials is produced by melting, forming, and a staple process. Each glass fiber is fine with small diameter and they are thus woven to form a certain flexible fabric. The procedure is repeated so that several layers are formed and are thus kept to dry. The end material is known as glass reinforced plastic.
