Abstracts

According to our (Global Info Research) latest study, the global Glass-Resin Hybrid Lenses market size was valued at US$ 50.26 million in 2025 and is forecast to a readjusted size of US$ 140 million by 2032 with a CAGR of 15.9% during review period.

A glass-resin hybrid lens harnesses the advantages of two materials. A single lens with advanced optical performance can provide two different characteristics and thus reduce the number of parts required for optical systems, helping reduce the footprint and weight of optical systems. By leveraging these advantages, this technology paves the way for new applications, such as XR (cross reality) glasses, and reducing the size and weight of interchangeable lenses for digital cameras.

The market for augmented reality (AR) portable and wearable devices is rapidly growing. Among various hardware implementation forms, head-mounted display (HMD) or near-eye display (NED) with see-through glasses offers the most effective and immersive AR experience. Optical waveguide, due to its thin and light nature, is considered to be an unparalleled choice for consumer-grade augmented reality (AR) glasses.
