Abstracts

According to our (Global Info Research) latest study, the global Glass Specialty Synthetic Fiber market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Fibers, such as polymers and carbon fiber, have mechanical qualities that are generally equivalent to glass fiber. Although not as stiff as carbon fiber, when used in composites, it is far less expensive and brittle. As a result, glass fibers are utilized as a reinforcing agent in various polymer goods to create glass-reinforced plastic, commonly known as fiberglass which is an extremely hard and lighter in weight material. Extruding small fragments of silica-based glass into numerous fibers with tiny diameters suited for textile processing produces glass fiber. Since the revelation that asbestos causes cancer followed by its removal from most items, glass fiber has grown in favor. The safety of glass fiber, on the other hand, is being questioned, since research reveals that the influence of this substance might induce toxicity akin to asbestos.
