According to our (Global Info Research) latest study, the global Glass Substrate for MEMS market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The substrate glass is an important part of the display module. The display module can be understood as a 'sandwich' structure - a liquid crystal sandwiched between two glass substrates. The quality of the substrate glass depends on the resolution, transmittance, thickness, weight, visual angle and other properties of the display module, so the substrate glass is very important for the component materials of the display module. Microelectronics are miniature circuits formed on solid (mainly semiconductor) materials. This paper mainly studies the microelectronics substrate glass .
