The global Glass Teapot market size is expected to reach \$ 1044 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

In 2025, global production of Glass Teapots reached 95 million units, with an average selling price of USD 8 per unit, total production capacity of 110 million units, and a gross margin of 38%.

A Glass Teapot is a tea-brewing vessel made primarily from heat-resistant glass, especially borosilicate glass, featuring high thermal resistance, strong tolerance to temperature changes, and visual transparency. Glass teapots allow users to clearly observe tea leaf infusion and liquor color, often combined with glass or stainless-steel infusers. They are suitable for brewing green tea, flower tea, black tea, and fruit tea, and are widely used in households, tea shops, and gift consumption scenarios.

The global Glass Teapot market shows steady demand growth, driven by the rising popularity of healthy tea-drinking habits, the upgrading of tea culture consumption, and increasing preference for transparent and environmentally friendly materials. North America and Europe mainly focus on household and gift consumption, favoring well-designed and durable mid- to high-end products. Asia-Pacific, particularly China, Japan, and Southeast Asia, represents the largest production and consumption region, supported by a mature glassware manufacturing base and strong tea culture traditions. Overall, the market is characterized by diversified designs, more specialized functions, and a growing share of mid- to high-end products.
