## Abstracts

The global Glass Tube Injection Bottle market size is expected to reach \$ 4932 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Glass tube injection bottles are disposable packaging containers for injections made from medicinal glass tubes through processes such as tube cutting, flame forming, bottle mouth processing, bottom forming, annealing, size inspection, appearance inspection, cleaning, and clean packaging. Common materials include medium borosilicate glass, low borosilicate glass, and sodium calcium glass. Among them, medium borosilicate glass is more commonly used in biologics, vaccines, freeze-dried powder injections, antibody drugs, oncology drugs, anesthetics, and high-end generic drugs due to its better water resistance, chemical stability, and drug compatibility. Compared with molded bottles, glass tube injection bottles have the characteristics of uniform wall thickness, high dimensional accuracy, good consistency of bottle mouth, high transparency, stable appearance quality, and adaptability to high-speed filling lines. The main capacity specifications include 2ml, 5ml, 7ml, 10ml, 15ml, 20ml, and 30ml. In 2025, global Glass Tube Injection Bottle production reached approximately 57,896 M Units, with an average global market price of around US\$ 58 per k unit.

The growth focus of the glass tube injection bottle market is shifting from the consumption of ordinary injection packaging to the replacement of high-quality medicinal glass and the upgrading of formulation safety. Injections require high chemical stability, internal surface water resistance, alkali metal precipitation, particle control, bottle mouth sealing consistency, and filling adaptability of packaging materials. Glass bottles are not only drug containers, but also an important component of the drug quality system. With the continuous expansion of biopharmaceuticals, vaccines, freeze-

dried formulations, oncology drugs, and high-end generic drugs, pharmaceutical companies have significantly increased their demand for medium borosilicate glass tube bottles, low precipitation glass bottles, pre sterilized bottles, and high-precision bottles suitable for high-speed filling lines. The future industry opportunities mainly focus on the localization of medium borosilicate glass tube bottles, high-end biopharmaceutical packaging, pre sterilized ready to use bottles, low particle and low boron precipitation products, automated visual inspection upgrades, and long-term supply certification system construction.
