Abstracts

Global Navigation Satellite System (GNSS) is the infrastructure that allows users with a compatible device to determine their position, velocity and local time by processing signals from satellites in space. GNSS signals are provided by a variety of satellite positioning systems, including global Constellations and Satellite-Based Augmentation Systems. Global Navigation Satellite System (GNSS) plays a significant role in high precision navigation, positioning, timing, and scientific questions related to precise positioning. Of course in the widest sense, this is a highly precise, continuous, all-weather and a real-time technique.

The GNSS market comprises products (receivers and devices) and services using GNSS-based positioning as a significant enabler. This Market Report primarily considers the core GNSS market. For multi-function devices (e.g. smartphones), the core market includes the value of GNSS functionality only, rather than the full device price and service revenues directly attributable to GNSS functionality (e.g. data downloaded by smartphones over cellular networks to use Location-Based Services). For multi-function devices, a correction factor is taken into account.

SCOPE OF THE REPORT:

This report studies the Global Navigation Satellite System (GNSS) market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Global Navigation Satellite System (GNSS) market by product type and applications/end industries.

The Global Navigation Satellite System (GNSS) industry plays a vital role in the ability of the countries to determine the position, velocity and local time from satellites in

space. Over the past few years, the rapid growth in GNSS commercial applications has been observed by the firms building navigation satellites and equipments. The advancement in technology and increasing interest in positioning techniques based on Global Navigation Satellite Systems (GNSS) such as Global Positioning System (GPS), cellular network infrastructure or on the integration of the two technologies for applications such as Automatic Vehicle Location (AVL), tracking systems, navigation has led to development in the navigation system of various countries such as US, India, China etc.

The global Global Navigation Satellite System (GNSS) market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Global Navigation Satellite System (GNSS).
