Abstracts

A glove is a garment covering the whole hand. Gloves have separate sheaths or openings for each finger and the thumb; if there is an opening but no (or a short) covering sheath for each finger they are called fingerless gloves. Fingerless gloves having one large opening rather than individual openings for each finger are sometimes called gauntlets, though gauntlets are not necessarily fingerless. Gloves which cover the entire hand or fist but do not have separate finger openings or sheaths are called mittens. Mittens are warmer than other styles of gloves made of the same material because fingers maintain their warmth better when they are in contact with each other. Reduced surface area reduces heat loss.

Scope of the Report:

This report focuses on the Gloves in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

One of the major factors driving this market's growth is the sharp increase in natural rubber production in countries like Thailand, Vietnam, and Indonesia. Although the world rubber production is expected to be weak during 2016-2017, the consumption in the Association of Natural Rubber Producing Countries (ANRPC) will increase by a significant margin. In order to overcome the factors leading to a decline in rubber production, the rubber board of India has taken several initiatives, which has led to an increase in production of rubber, which will positively affect the gloves market over the coming years.

One of the recent trends gaining traction in the market is the increasing adoption of green and recyclable material for manufacturing gloves. Most product manufacturers

are increasingly focusing on the use of green manufacturing processes, technologies, and sustainability. Also, they are using renewable resources like sun and wind power to minimize costs. The growing demand for green products will lead to innovations in new manufacturing processes, ensuring that vendors are committed to use environmental friendly alternatives rather than petroleum-based plastics.

The worldwide market for Gloves is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
