According to our (Global Info Research) latest study, the global GLP-1 Agonist market size was valued at USD 21200 million in 2022 and is forecast to a readjusted size of USD 59500 million by 2029 with a CAGR of 15.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

GLP-1 is a polypeptide hormone secreted by the intestine after being stimulated by food. It can stimulate the pancreatic beta cells to secrete insulin and participate in the regulation of blood sugar balance in the human body. However, natural GLP-1 is easily degraded by dipeptidyl peptidase in vivo and loses its activity. In order to make GLP-1 better for clinical application, drug developers have modified its structure and developed a series of GLP-1 receptor agonists. GLP-1 receptor agonists can exert the same biological effects as natural GLP-1, and can also avoid being degraded and inactivated, thereby prolonging the action time.
