Abstracts

The global GLP-1 Agonist market size is expected to reach \$ 59500 million by 2029, rising at a market growth of 15.9% CAGR during the forecast period (2023-2029). GLP-1 is a polypeptide hormone secreted by the intestine after being stimulated by food. It can stimulate the pancreatic beta cells to secrete insulin and participate in the regulation of blood sugar balance in the human body. However, natural GLP-1 is easily degraded by dipeptidyl peptidase in vivo and loses its activity. In order to make GLP-1 better for clinical application, drug developers have modified its structure and developed a series of GLP-1 receptor agonists. GLP-1 receptor agonists can exert the same biological effects as natural GLP-1, and can also avoid being degraded and inactivated, thereby prolonging the action time.

This report studies the global GLP-1 Agonist production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for GLP-1 Agonist, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
