Abstracts

According to our (Global Info Research) latest study, the global GLP-1 Autoinjectors market size was valued at US\$ 4445 million in 2025 and is forecast to a readjusted size of US\$ 7527 million by 2032 with a CAGR of 8.0% during review period.

GLP-1 autoinjectors are prefilled or multidose pen-based drug delivery devices designed to administer GLP-1 receptor agonists or related incretin therapies through subcutaneous injection, mainly for diabetes and obesity treatment. They combine a high-value biologic or peptide drug with a user-friendly injection mechanism, enabling patients to self-administer weekly or daily doses with lower handling complexity than vial-and-syringe injection. In 2025, Global GLP-1 autoinjector sales are estimated at about 1,350 million units, with an average ex-works device value of about US\$3.2 per unit. The industry chain runs from medical-grade polymers, springs, needles, glass cartridges/syringes and precision molds to pen injector design, device assembly, sterile filling, pharmaceutical combination-product registration, and diabetes/obesity drug distribution.

Demand is mainly driven by the rapid expansion of GLP-1 therapies from diabetes into chronic weight management, the shift of obesity treatment toward long-term self-administered medication, and patients' preference for convenient home injection. Supply-side growth is also reinforced by pharmaceutical companies' need to reduce device-related bottlenecks, improve dose adherence, differentiate branded drugs through usability, and secure large-scale dual-sourcing capacity for high-volume GLP-1 launches.
