Abstracts

The global GLP-1 Combination and Multi-agonist Drugs market size is expected to reach \$ 61694 million by 2032, rising at a market growth of 17.1% CAGR during the forecast period (2026-2032).

GLP-1 combination and multi-agonist drugs are innovative medicines built around the GLP-1 pathway while also engaging GIP, glucagon, amylin or other metabolic targets to improve body weight, glucose control, fatty liver disease and cardiometabolic risk through synergistic mechanisms. The category includes dual agonists, tri-agonists, fixed-dose combinations and combination candidates, with evaluation focused on greater weight reduction, broader metabolic benefit, safety, dosing convenience and long-term adherence. In 2025, global GLP-1 Combination and Multi-agonist Drugs production reached approximately 320 million unit. The average gross profit margin of this product is 80%.

GLP-1 combination and multi-agonist drugs are among the most active innovation areas in obesity and metabolic disease. Dual- and tri-target mechanisms may further improve weight-loss efficacy beyond traditional GLP-1 therapy and expand use into diabetes, MASH and broader cardiometabolic risk management.

Industrial competition is concentrated among large global pharmaceutical companies and selected innovative biotechnology firms. Approved dual agonists have accelerated market education and physician adoption, while late-stage tri-agonists, GLP-1/glucagon dual agonists and amylin combinations may drive the next wave of differentiation.

Growth is influenced by clinical trial outcomes, long-term safety, capacity scale-up, drug pricing and payer coverage. Future market focus will shift toward the upper limit of

efficacy, muscle-mass preservation, post-treatment weight management, liver metabolic improvement and integrated chronic disease care.
