Abstracts

Glucagon is a metabolic hormone secreted by the pancreas that raises blood glucose levels by causing the liver to rapidly convert glycogen (the stored form of glucose) into glucose, which is then released into the bloodstream. Glucagon and insulin are two critical hormones in a glycemic control system that keeps blood glucose at the right level in healthy individual. Glucagon is a medicine which used to treat severe low blood sugar (hypoglycemia). Glucagon works by telling your body to release sugar (glucose) into the bloodstream to bring the blood sugar level back up.
