According to our (Global Info Research) latest study, the global Glucoraphanin and Sulforaphane market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Glucoraphanin, or 4-methylsulfinylbutyl glucosinolate, is a major component of broccoli, kale, Brussels sprouts, cabbage, and other vegetables. Glucoraphanin is hydrolyzed to sulforaphane, or 4-methyl-sulfinylbutyl isothiocyanate, other isothiocyanates, and inactive nitrile compounds.

Sulforaphane is a compound within the isothiocyanate group of organosulfur compounds. It is produced when the enzyme myrosinase transforms glucoraphanin, a glucosinolate, into sulforaphane upon damage to the plant (such as from chewing or chopping during food preparation), which allows the two compounds to mix and react.
