According to our (Global Info Research) latest study, the global Glyceric Acid market size was valued at US\$ 12.4 million in 2024 and is forecast to a readjusted size of USD 19.7 million by 2031 with a CAGR of 3.0% during review period.

Glyceric acid is an organic compound with the formula $\text{HOCH}_2\text{CH}(\text{OH})\text{CO}_2\text{H}$. It's a naturally occurring three-carbon sugar acid, chiral in nature. This colorless syrupy liquid is primarily produced by the oxidation of glycerol. Glyceric acid is significant in biochemistry, where its phosphate derivatives, such as 2-phosphoglyceric acid and 3-phosphoglyceric acid, play crucial roles in glycolysis.

The glyceric acid market is experiencing moderate growth driven by increasing applications in various sectors. Key trends include a growing interest in bio-based production methods of glyceric acid from glycerol, a byproduct of biodiesel production. This aligns with the increasing focus on sustainable and renewable resources. Research is focused on developing more efficient and cost-effective methods for producing glyceric acid, including enzymatic and microbial conversions. There is also growing interest in exploring new applications for glyceric acid derivatives, such as in the production of biodegradable polymers, emulsifiers, and pharmaceuticals. In the pharmaceutical sector, glyceric acid derivatives are being investigated for their potential use in drug delivery systems and as chiral building blocks for synthesizing complex molecules. The cosmetic industry is also showing interest in glyceric acid due to its humectant properties, potentially incorporating it into skincare products. However, the relatively high cost of production and limited large-scale applications currently restrict more rapid market expansion. Further research and development into more cost-effective production methods and expanded applications are expected to drive future growth in the glyceric acid market.
