## Abstracts

The global Glyceryl Monooleate market size is expected to reach \$ 378 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Glyceryl Monooleate is a general term for a class of ester compounds formed by the esterification reaction of glycerol and oleic acid, mainly including monooleate glycerol ester, dioleic acid glycerol ester, and trioleate glycerol ester. This type of substance has both hydrophilic and oleophilic groups, and belongs to typical non-ionic surfactants with good emulsifying, lubricating, dispersing, and stabilizing properties. It is widely used in food additives, cosmetics, pharmaceutical excipients, and industrial additives. In 2025, global Glyceryl Monooleate production reached approximately 94.38 K MT, with an average global market price of around US\$ 2,816 per MT.

The overall market for Glyceryl Monooleate has shown stable growth, mainly driven by demand for food processing, personal care, and industrial applications, with the food and daily chemical sectors accounting for the majority of the market share. With the increasing demand for natural and green raw materials from consumers, the demand for plant-based glyceroleate products continues to rise. From the perspective of product structure, monooleate glycerides are the most common variety, occupying a core market share. The industry competition pattern is relatively scattered, with oil and fat chemical plants as the main enterprises, resulting in high product homogeneity, and prices are significantly affected by fluctuations in oil and fat raw materials. The future market development will upgrade towards high purity, functionalization, and biobased directions, while there is a certain growth space in the pharmaceutical and high-end application fields.

This report studies the global Glyceryl Monooleate production, demand, key

manufacturers, and key regions.
