According to our (Global Info Research) latest study, the global Glycobiology & Glycomics market size was valued at USD 1176.1 million in 2023 and is forecast to a readjusted size of USD 1443.2 million by 2030 with a CAGR of 3.0% during review period.

Glycomics is the comprehensive study of glycomes (the entire complement of sugars, whether free or present in more complex molecules of an organism), including genetic, physiologic, pathologic, and other aspects. Glycomics 'is the systematic study of all glycan structures of a given cell type or organism' and is a subset of glycobiology. The term glycomics is derived from the chemical prefix for sweetness or a sugar, 'glyco-', and was formed to follow the naming convention established by genomics (which deals with genes) and proteomics (which deals with proteins).

Glycobiology is fast emerging as a primary field of interest for biomolecular and biomedical research around the globe. Once considered merely supporting structures, the sugars have now been widely recognized to be a vital component in running the complex machinery of life itself.

Global Glycomics/Glycobiology key players include ThermoFisher Scientific, Danaher, Shimadzu Corporation, ProZyme, etc. Global top four manufacturers hold a share over 15%.

North America is the largest market, with a share about 40%, followed by Europe and Asia-Pacific, both have a share about 50 percent.

In terms of product, Instruments is the largest segment, with a share about 34%. And in terms of application, the largest application is Drug Discovery & Development, followed by Diagnostics, etc.
