Abstracts

According to our (Global Info Research) latest study, the global Glycol Heat Transfer Fluid market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

In heat transfer applications, glycol is generally used in one of two forms: ethylene glycol water (EGW) or propylene glycol water (PGW). EGW has a high boiling point, low freezing point, thermal stability over a broad temperature range, and excellent specific heat and thermal conductivity. PGW offers an even lower specific heat and a smaller risk of oral toxicity. The latter quality makes it suitable for use in food and beverage applications and locations with enclosed spaces.
