## Abstracts

The global Glycol Heat Transfer Fluid market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

In heat transfer applications, glycol is generally used in one of two forms: ethylene glycol water (EGW) or propylene glycol water (PGW). EGW has a high boiling point, low freezing point, thermal stability over a broad temperature range, and excellent specific heat and thermal conductivity. PGW offers an even lower specific heat and a smaller risk of oral toxicity. The latter quality makes it suitable for use in food and beverage applications and locations with enclosed spaces.

This report studies the global Glycol Heat Transfer Fluid production, demand, key manufacturers, and key regions.
