Abstracts

Glycol is a colorless liquid derived from petrochemicals. It is sweet in taste. It is used as an anti-freeze agent mainly in automobile cooling systems. It is a water-miscible coolant used in various heat transfer and cooling applications also. Glycol is used in various applications such as HVAC systems, automobiles, polyester fiber and resins, textile, airlines, and others.

Scope of the Report:

This report focuses on the Glycol in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The growing demand for unsaturated polyester resins as one of the primary factors that will have a positive impact on the market's growth in the coming years. The adoption of unsaturated polyester resins is increasing due to the rising shift towards the consumption of eco-friendly products. Moreover, the introduction of stringent regulations by the European Union (EU) to reduce the emission of volatile organic compounds (VOC), inducing manufacturers to use eco-friendly chemicals, will also boost the application of unsaturated polyester resins. Furthermore, the expansion of the composite industry will also drive the need for unsaturated polyester resins. Since the production of unsaturated polyester requires a precursor such as glycol, the increasing demand for these resins will have a significant impact on this market's growth prospects.

The worldwide market for Glycol is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017,

according to a new GIR (Global Info Research) study.
