According to our (Global Info Research) latest study, the global Glycolonitrile Solution market size was valued at US\$ 19.1 million in 2024 and is forecast to a readjusted size of USD 24.7 million by 2031 with a CAGR of 3.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Glycolonitrile Solution, also known as ethanol cyanohydrin solution, is a chemical compound formed by the addition reaction of hydrocyanic acid (HCN) and formaldehyde. It is typically supplied as a 50% aqueous solution and appears as a colorless to light yellow transparent liquid with a pungent odor. While it is highly toxic and corrosive, it is more stable and safer to handle compared to pure hydrocyanic acid. As a vital chemical intermediate, glycolonitrile solution is widely used in pharmaceuticals, electroplating, pesticides, mineral processing, and dye industries. It plays an essential role in the production of glycine, iminodiacetic acid (glyphosate intermediate), polyglycolic acid, indigo dyes, and EDTA. Its high reactivity and liquid form make it efficient and convenient for industrial applications.
