Abstracts

The global Glycyrrhiza Glabra Root Extract market size is expected to reach \$ 413 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

In 2025, the global sales volume of Glycyrrhiza glabra root extract reached 11,000 metric tons, with an average price of \$23,053 per ton.

Glycyrrhiza glabra, a flowering plant of the bean family Fabaceae, from the root of which a sweet, aromatic flavouring can be extracted. The liquorice plant is a herbaceous perennial legume native to the Western Asia and southern Europe. It is not botanically related to anise, star anise, or fennel, which are sources of similar flavouring compounds. Liquorice is used as a flavouring in candies and tobacco, particularly in some European and West Asian countries. Glycyrrhiza glabra root extracts have been used in herbalism and traditional medicine.

The raw material for Glycyrrhiza glabra root extract consists of the dried roots and rhizomes of Glycyrrhiza glabra. This perennial herbaceous legume has extremely strict requirements regarding its growing environment and is primarily distributed across the Mediterranean coast, West Asia, Central Asia, and regions in China such as Xinjiang, Gansu, and Inner Mongolia.

The cost structure of Glycyrrhiza glabra root extract is characterized by a very high proportion of raw material costs and significant value-added from processing technology, with substantial price variations depending on the product grade. For standard food-grade crude extracts, raw material costs account for approximately 35%-45% of the total cost, with the market wholesale price of dried *Glycyrrhiza glabra*

roots ranging from roughly \$9 to \$17 per kilogram. In contrast, the total cost of pharmaceutical-grade standardized extracts is about two to three times that of food-grade products, due to additional expenses associated with purification, testing, and GMP certification. The most extreme cost structure is found in cosmetic-grade high-purity glabridin; raw material costs exceed 50%-60% of the total, reflecting the complexity of the extraction and purification processes.
