General motion control (GMC) is a type of motion control which helps control the velocity, position, torque, acceleration, and other characteristics of machines. The GMC equipment has a key role in achieving agility and flexibility in manufacturing operations at a lower lifecycle cost of plant equipment. The GMC system includes three generally accepted functional elements: controller, drive, and motor. Several possible configurations add to the variety of offerings available. The motion controller can be offered as an integral portion of the drive system, a standalone system, or a bus-based module with external drive interface signals. In this report, we only count and analyze
