Abstracts

According to our latest research, the global GMFb Recombinant Protein market size will reach USD 162 million in 2031, growing at a CAGR of 6.3% over the analysis period.

GMF-beta belongs to the actin-binding ADF/cofilin family of proteins. It contains an ADF-H domain, but crystallographic and NMR studies have shown structural differences between the human and mouse ADF-H domains. It was originally identified as a growth gamma differentiation factor acting on neurons and glial cells. It has also been shown to function intracellularly as a regulator of MAP kinase signaling.
