A GNSS triplexer is a type of electronic filter that allows the simultaneous use of multiple Global Navigation Satellite System (GNSS) signals within a single device or system. GNSS triplexers typically consist of three bandpass filters that allow the reception of signals from the GPS, GLONASS, and Galileo satellite constellations, while isolating each frequency band to prevent interference. This allows for accurate positioning, navigation, and timing (PNT) information to be obtained from multiple GNSS systems.
