Abstracts

According to our (Global Info Research) latest study, the global GNSS/GPS Receiver Module market size was valued at US\$ 476 million in 2025 and is forecast to a readjusted size of US\$ 725 million by 2032 with a CAGR of 6.4% during review period.

A GNSS/GPS receiver module is an integrated electronic subsystem that receives and processes signals from Global Navigation Satellite Systems (such as GPS, GLONASS, Galileo, BeiDou) to determine precise geographic location, time, and velocity for positioning and navigation applications.

The GNSS/GPS receiver module industry chain begins upstream with raw material suppliers for semiconductor wafers, RF front-end components, crystal oscillators, and printed circuit boards, flows into midstream fabrication where chip designers, foundries, module integrators, and firmware developers produce and calibrate multi-constellation, multi-band receivers, and culminates downstream in system integrators and end markets including automotive navigation systems, smartphones, wearables, industrial trackers, IoT devices, UAV guidance, and precision surveying equipment, supported by distribution channels, software ecosystems, aftermarket service providers, and installation partners that deliver location services to consumer, industrial, and government sectors worldwide.

Across the GNSS/GPS module ecosystem, major semiconductor and navigation players are constructing and planning multi-site expansion projects including new wafer fab capacity for advanced GNSS SoCs in Asia and North America, integrated module assembly lines with AI-driven calibration in Europe, 5G-GNSS hybrid chipset development programs, urban navigation enhancement trials in smart city districts,

precision RTK module product launches for autonomous vehicles and agriculture, collaborations on BeiDou and Galileo integration for global coverage, UAV navigation platform upgrades, and joint R&D centers focused on low-earth orbit (LEO)-assisted positioning that collectively aim to scale production, improve performance, and address emerging multiband, multi-constellation demands.
