According to our (Global Info Research) latest study, the global Golf Simulators market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The golf simulator USES computer graphics and image processing technology to load the international standard golf course data into the system static storage. Automatically when the system running, computer data input system within the field of dynamic memory, and through the large screen projection projecting stadium landscape realistically the resistance to impact on the screen in front of the play, there is a golf simulator so feel they are in the stadium, outdoor golf simulator is a simulation and an indoor golf.

The golf simulator consists of three parts: the measurement part of the flight parameters of the golf ball, and the 3d simulation and display part of the golf course. The measuring part of the flight parameters of the golf ball is composed of a measuring instrument and a central controller of the computer. The two parts are combined into the measuring part of the golf ball, which completes the measurement of the initial velocity, altitude Angle, deviation Angle and rotation of the golf ball. The 3d simulation and display part of golf course consists of computer graphics processor, high definition projector and curtain (standard 3 m ?4 m) with anti-hitting and buffering effect. This part completes the 3d simulation display of golf course ground and golf ball flight process. After the user use the golf ball measuring system will golf dynamic parameter analysis, computer graphics processor based on the simulation of the dynamic parameters of golf ball flight trajectory, real-time display on the screen, the whole process is closely combined with strike action, without any pause, the user feel as if in a real golf course to play.
