Goliath gantry cranes, also known as portal cranes, are large and powerful lifting systems used in industrial settings for heavy-duty material handling tasks. These cranes are characterized by their elevated structure, which consists of two vertical steel legs supporting a horizontal bridge or girder. The bridge spans the entire working area and can move along the legs, providing a significant range of coverage. Goliath gantry cranes are commonly employed in shipyards, construction sites, manufacturing facilities, and other industrial environments to lift and move heavy loads with precision and efficiency. Their robust design and high load capacity make them suitable for handling large and bulky items, such as containers, machinery, and structural components.
