Abstracts

The global Goods-to-Person (G2P) Picking System market size is expected to reach \$ 2223 million by 2032, rising at a market growth of 20.0% CAGR during the forecast period (2026-2032).

Goods-to-person picking systems represent a significant evolution of 'goods-to-person' picking technology. Unlike the traditional 'person-to-goods' model, where workers must navigate between shelves to find products, this system uses automated equipment to transport boxes containing goods directly from the automated warehouse to fixed picking workstations. Operators simply wait at their workstations for the boxes to arrive and then pick them. This model fundamentally eliminates the significant time wasted by workers walking aimlessly within the warehouse, concentrating human resources on the core picking operations. In terms of system composition, a typical goods-to-person picking system usually consists of core modules such as high-density automated racking, storage and retrieval robots (e.g., shuttles and elevators), automated guided vehicles (AMRs), conveyor lines, and intelligent scheduling software.

This report studies the global Goods-to-Person (G2P) Picking System demand, key companies, and key regions.
