Abstracts

Cyber threats are Internet-based attempts to disrupt or damage information systems and hack critical information using spyware, malware, and phishing. Cyber security solutions enable the US government to maintain data confidentiality by monitoring, detecting, reporting, and countering cyber threats. The adoption of cyber security solutions is expected to increase with the growing penetration of the Internet among organizations of the US government.

Scope of the Report:

This report studies the Government Cyber Security market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Government Cyber Security market by product type and applications/end industries.
The adoption of the hybrid deployment model for cyber solutions will be one of the major factors that will have a positive impact on the growth of the market. This model helps to overcome the issues that are prevalent in traditional deployment models. The adoption of hybrid deployment model lowers the total cost of ownership by ensuring the on-premises data protection without the need for skilled workers. Also, hybrid cyber security solutions are less expensive than the traditional full license security solutions because they follow the pay-per-use model. The demand for hybrid deployment models in various industries is increasing due to its ease of installation and upgrades, which in turn, will encourage emerging vendors to come up with hybrid cloud-based security solutions.
