According to our (Global Info Research) latest study, the global GPC Column market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The GPC column is a chromatographic column used for separation and purification of high molecular compounds, and the separation is based on the difference in molecular size. It utilizes the osmotic properties of polymer compounds on the stationary phase to achieve separation.

GPC columns usually consist of the following parts: column barrel, column packing, mobile phase, and detector. GPC columns are widely used and can be used to separate and purify polymers, proteins, peptides and other polymers. They can provide information about the size distribution, degree of polymerization and molecular weight of polymers, and are of great significance for studying the structure, properties and performance of materials.
