Abstracts

The global GPCR Screening Service market size is expected to reach \$ 638 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

GPCR screening services are professional in vitro pharmacological testing services for drug discovery and early-stage research and development. Focusing on G protein-coupled receptor targets, these services help clients discover, confirm, and optimize candidate molecules acting on GPCR targets through cell line construction, receptor expression verification, binding experiments, functional experiments, signal pathway detection, initial compound screening, dose-response confirmation, selectivity evaluation, off-target safety spectral screening, and biased signal analysis.

From a demand structure perspective, targets related to metabolic diseases, obesity, diabetes, neurological diseases, pain, cardiovascular diseases, immune inflammation, and the tumor microenvironment are significant sources of demand for GPCR screening services. The continued development of GLP-1R, GIPR, GCGR, 5-HT receptors, opioid receptors, chemokine receptors, adenosine receptors, S1P receptors, cannabinoid receptors, and orphan GPCRs is driving pharmaceutical and biotechnology companies to conduct receptor function screening, selective profiling, and off-target safety evaluation. With advancements in structural biology, cryo-electron microscopy, AI-assisted molecular design, and allosteric modulator development, customer demand for GPCR services is shifting from 'single activity screening' to a combination of services encompassing 'multiple pathways, multiple readings, multiple species, and mechanism interpretation.' Service providers with orthogonal assay design capabilities are more likely to secure high-value projects.
