Abstracts

GPON (Gigabit Passive Optical Network) is a point-to-multipoint access network. It consists of mainly two active transmission equipment's, optical line termination (OLT) and optical network unit (ONU). GPON supports high-bandwidth, long reach and triple-play services. It is designed to carry both analog POTS and data services. This delivers the highest speed, longest life, future proof, lowest cost network infrastructure. Increasing demand for bandwidth due to streaming video, content sharing, social media application and online gaming is constantly pushing the requirement for the higher bit rates and better experience.

Scope of the Report:

This report focuses on the GPON Equipments in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. GPON infrastructure comprises a single optical fiber, which is accessed by multiple users via optical splitters. Thus, GPON is considered as the most cost-effective technology for FTTH (fiber to the home) deployments. Furthermore, increase in adoption of such services and growth in investments from both public & private sectors are expected to drive the global market.

The worldwide market for GPON Equipments is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
