According to our (Global Info Research) latest study, the global GPON SFU Terminal market size was valued at US\$ 937 million in 2025 and is forecast to a readjusted size of US\$ 1505 million by 2032 with a CAGR of 5.5% during review period.

GPON SFU terminal is a single home user unit optical network terminal based on GPON technology, mainly used in FTTH fiber to the home scenarios. It converts passive optical network signals issued by the operator's OLT central equipment into user side Ethernet data signals, usually with single or multi port Ethernet interfaces as the main function. Its functional positioning is simpler than that of home gateways, and it generally does not integrate complex routing WiFi? The core values of voice and smart home management functions are low cost, low power consumption, easy installation, and convenient remote management by operators. In 2025, the global sales of GPON SFU terminals will be approximately 49.2 million units, with an average unit price of approximately \$18.5 per unit, a capacity utilization rate of approximately 73.8%, and an industry average gross profit margin of approximately 18.4%. Upstream enterprises mainly include PON chips, optical transceiver components, optical devices PCB? Suppliers of power adapters, connectors, plastic casings, electronic components, firmware software, and automation testing equipment. The midstream includes ONU and ONT manufacturers, communication terminal ODM foundries, and branded equipment providers. The downstream includes telecommunications operators, regional broadband operators, broadcasting and television network companies, residential broadband service providers, weak current engineering companies, government enterprise network integrators, and channel installation service providers. In the product cost structure, PON main control chip accounts for about 28.6%, optical transceiver components account for about 22.4%, PCB and electronic components account for

about 13.2%, power and interface components account for about 7.6%, structural components and plastic shells account for about 8.3%, manufacturing labor, testing and calibration account for about 9.4%, packaging logistics account for about 4.2%, and software, certification, and after-sales quality assurance account for about 6.3%. The downstream demand list includes household fiber optic broadband access, replacement of old copper cable broadband, low ARPU user access, rural broadband coverage, apartment and dormitory broadband access, optical transformation of broadcasting and television networks, regional ISP expansion, centralized bidding and replacement by operators, and basic optical access in parks and buildings. The downstream customer list includes China Mobile, China Telecom, China Unicom, Jio, Bharti Airtel, VNPT, AIS, Telkom Indonesia, PLDT, Claro, Telmex, Turk Telekom, Telecom Egypt, Orange, Vodafone, and small and medium-sized broadband operators in various regions. In terms of demand and business opportunities, policy drivers come from broadband popularization, gigabit cities, digital rural areas, public network coverage, and communication infrastructure upgrade projects. Technological innovation drivers come from low-power PON chips, miniaturized optical modules, automated opening, remote diagnosis, cloud operation, and low-cost whole machine design. Consumer demand changes are reflected in the increasing dependence on fiber optic access for home high-definition video, remote work, online education, smart homes, and stable internet experience. However, GPON SFU also faces pressure to replace XG PON, XGS PON terminals, and integrated home gateways. Therefore, the main business opportunities are concentrated in emerging market FTTH popularization, mature market low-cost replacement, operator equipment procurement, low-power green terminal upgrades, and price sensitive broadband access scenarios.
